# CNN Case Studies

Joe Yeh, M.D.

# Common layer patterns

- Repeating pattern of stacks of CONV-RELU layers followed by POOL layer, which transitions into a few fully connected layers
  - INPUT -> [[CONV -> RELU]\*N -> POOL?]\*M -> [FC -> RELU]\*K -> FC

# Some good rules to follow (but not always)

- Input size should be divisible by 2 many times
- Use a convolution stride of 1 and pooling to reduce size
- Use same padding to keep size constant after convolution
- Use a stack of small filters instead of fewer large filters
- Don't try to reinvent the wheels (unless your goal is such!)

# Recent departures

- Residual network doesn't have a fully connected layer
- Inception module has multiple convolutions in parallel

#### Landmark CNN architectures

- LeNet (<a href="http://yann.lecun.com/exdb/publis/pdf/lecun-98.pdf">http://yann.lecun.com/exdb/publis/pdf/lecun-98.pdf</a>)

#### LeNet-5

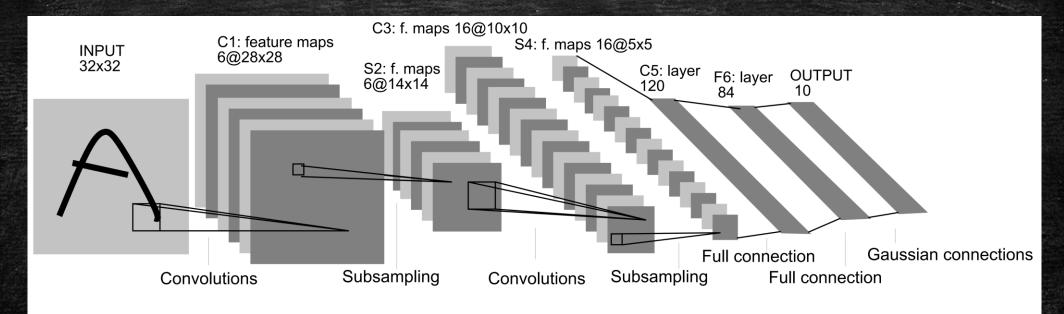

Fig. 2. Architecture of LeNet-5, a Convolutional Neural Network, here for digits recognition. Each plane is a feature map, i.e. a set of units whose weights are constrained to be identical.

LeCun et al. Gradient-Based Learning Applied to Document Recognition, 1998 <a href="http://yann.lecun.com/exdb/publis/pdf/lecun-98.pdf">http://yann.lecun.com/exdb/publis/pdf/lecun-98.pdf</a>

#### AlexNet

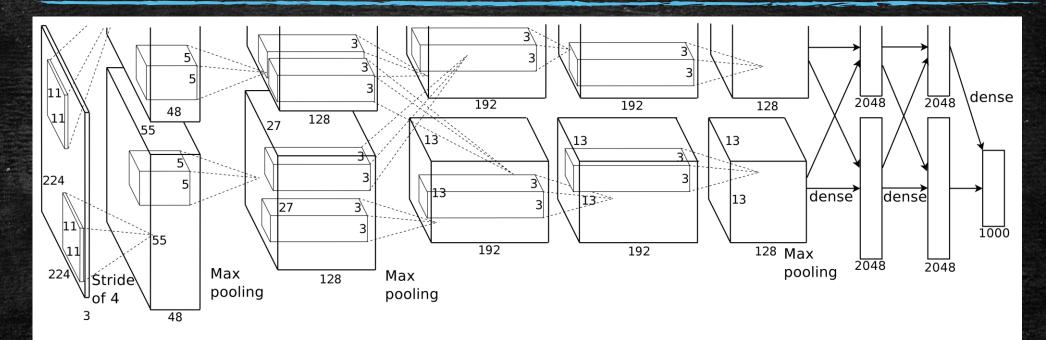

Figure 2: An illustration of the architecture of our CNN, explicitly showing the delineation of responsibilities between the two GPUs. One GPU runs the layer-parts at the top of the figure while the other runs the layer-parts at the bottom. The GPUs communicate only at certain layers. The network's input is 150,528-dimensional, and the number of neurons in the network's remaining layers is given by 253,440–186,624–64,896–64,896–43,264–4096–4096–1000.

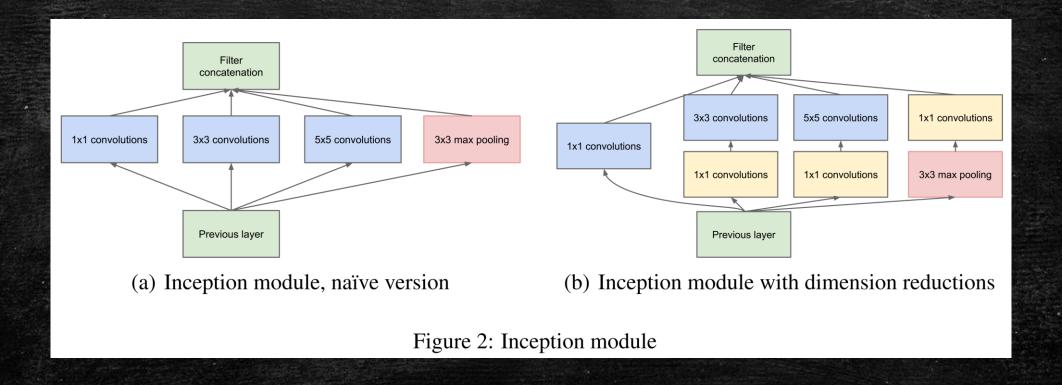

Krizhevsky et al., ImageNet Classification Using Deep Convolutional Neural Network, 2012 <a href="https://papers.nips.cc/paper/4824-imagenet-classification-with-deep-convolutional-neural-networks.pdf">https://papers.nips.cc/paper/4824-imagenet-classification-with-deep-convolutional-neural-networks.pdf</a>

Table 1: **ConvNet configurations** (shown in columns). The depth of the configurations increases from the left (A) to the right (E), as more layers are added (the added layers are shown in bold). The convolutional layer parameters are denoted as "conv $\langle$ receptive field size $\rangle$ - $\langle$ number of channels $\rangle$ ". The ReLU activation function is not shown for brevity.
